# Key questions for FPE pioneers:

- **Balanced or unbalanced?**
- **How to synchronise pistons?**
- **What to do with the power?**

Decorative graphic of stylized lightning bolts in blue and white, extending horizontally across the bottom of the slide.

# Proliferation of 'new engine' concepts

*LiquidPiston*

*RadMax*

*Lontra*

*Ox2*

*Moller*

*Scuderi*

*REVETEC*

*Star Rotor*

*Anyoon*

*Hefley*

*Go*

*Libralato*

*EcoMotors*

*Astremo*

.. and  
many  
more

## LINEAR POWER 2015

SEPTEMBER 7 + 8 UNIVERSITY OF BRIGHTON

Linear e-machine & free piston technology forum

# Car companies don't buy new engine concepts

**LINEAR POWER 2015**

SEPTEMBER 7 + 8 UNIVERSITY OF BRIGHTON

Linear e-machine & free piston technology forum

# Pre-requisites for mass adoption

1. Technology maturity (TRL/MRL)
2. Demonstrated performance advantage
3. Cost competitive

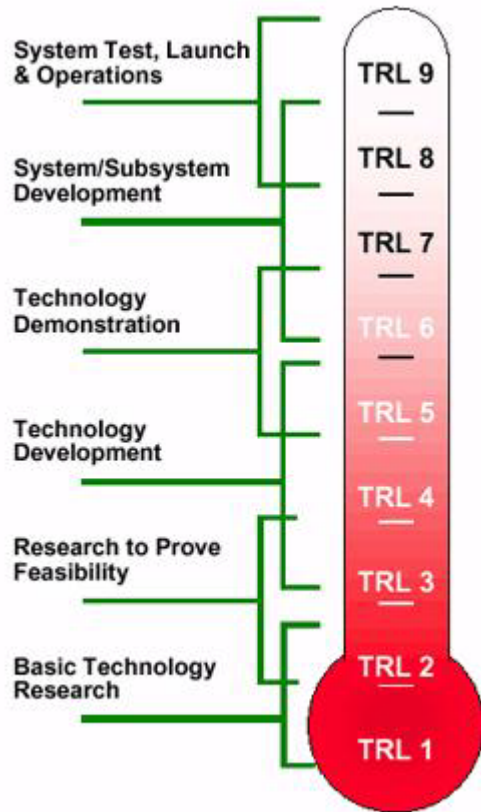

**LINEAR POWER 2015**  
SEPTEMBER 7 + 8 UNIVERSITY OF BRIGHTON

Linear e-machine & free piston technology forum

# Technology maturity

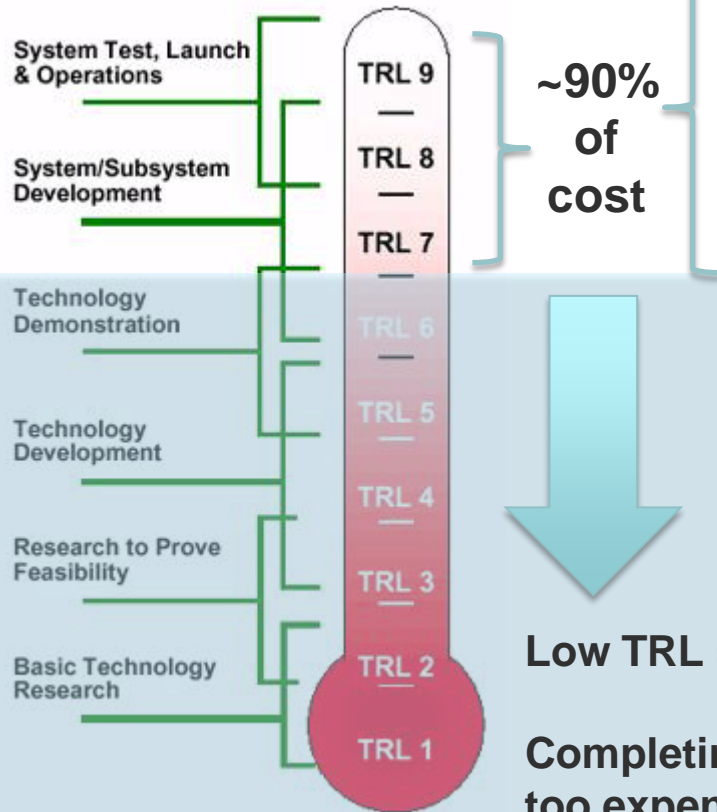

Manufacturing Readiness Level (MRL)		
Phase	MRL	State of Development
Phase 3: Production Implementation	9	Full production process qualified for full range of parts and full metrics achieved
	8	Full production process qualified for full range of parts
	7	Capability and rate confirmed
Phase 2: Pre production	6	Process optimised for production rate on production equipment
	5	Basic capability demonstrated
Phase 1: Technology assessment and proving	4	Production validated in lab environment
	3	Experimental proof of concept completed
	2	Application and validity of concept validated or demonstrated
	1	Concept proposed with scientific validation

## LINEAR POWER 2015

SEPTEMBER 7 + 8 UNIVERSITY OF BRIGHTON

Linear e-machine & free piston technology forum

# Technology maturity

Manufacturing Readiness Level (MRL)		
Phase	MRL	State of Development
Phase 3: Production Implementation	9	Full production process qualified for full range of parts and full metrics achieved
	8	Full production process qualified for full range of parts
	7	Capability and rate confirmed
Phase 2: Pre production	6	Process optimised for production rate on production equipment
	5	Basic capability demonstrated
Phase 1: Technology assessment and proving	4	Production validated in lab environment
	3	Experimental proof of concept completed
	2	Application and validity of concept validated or demonstrated
	1	Concept proposed with scientific validation

Low TRL = under-performance, low MRL = high cost

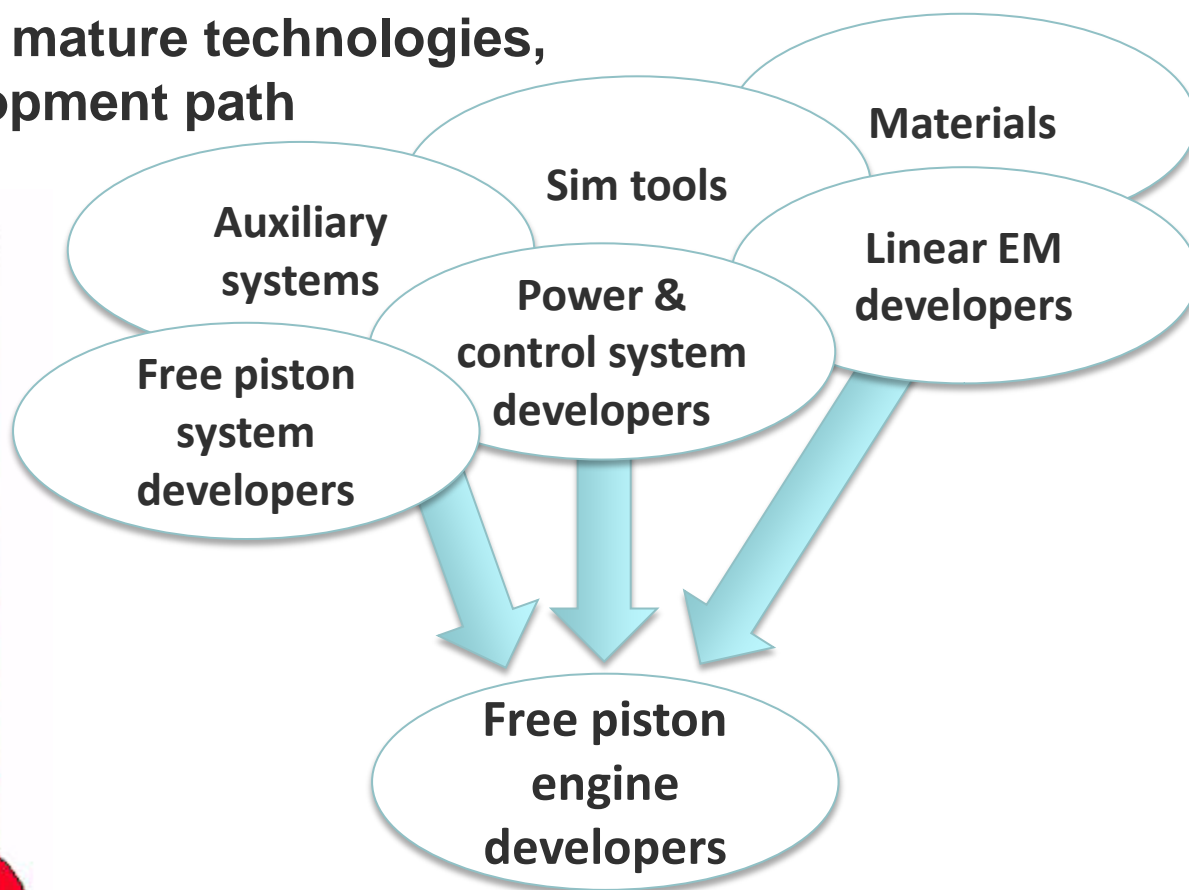

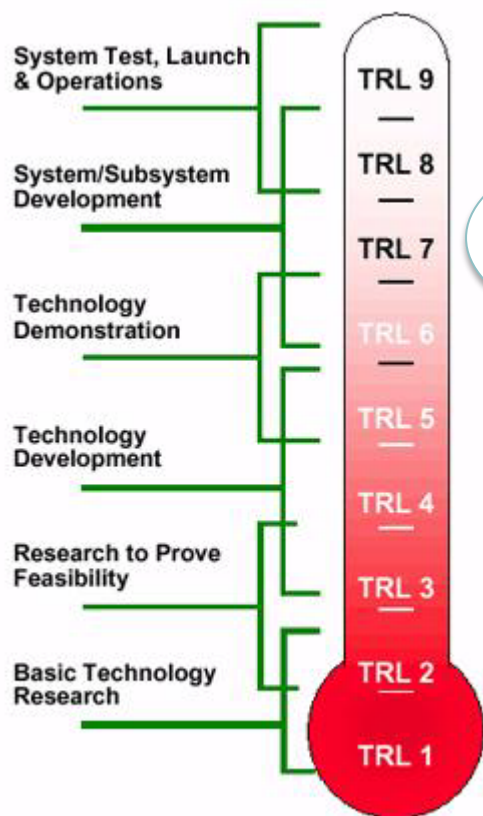

Completing the development journey pre-revenue is too expensive, so technology remains in the lab
